# Knox Management Enrollment

**PRODUCT: SOLO**

**VERSION:**

**AUTHOR: Clarice Adolacion-Basa**

**APPROVED BY:**

## Enrolling Galaxy Watch 4, 5, and 6 in Samsung Knox

### Requirements:

- Galaxy Watch 4, 5, or 6 (at least 4.0 Wear OS Version)
- Android 11 or later (Samsung Smartphone)
- Do e-sim provision before enrollment

### Enrollment Preparation

**Step 1** – Before you begin the enrollment process, download, and install two apps from Google Play: Galaxy Wearable for Enterprise and Galaxy Wearable.

Note: Apps must be in the latest version.

**Step 2** – After Galaxy Wearable for Enterprise is installed on the phone, sign in to Knox Manage to create a device group and generate a Wear OS enrollment token. This token will be used to provision enterprise smartwatches.

To generate the token:

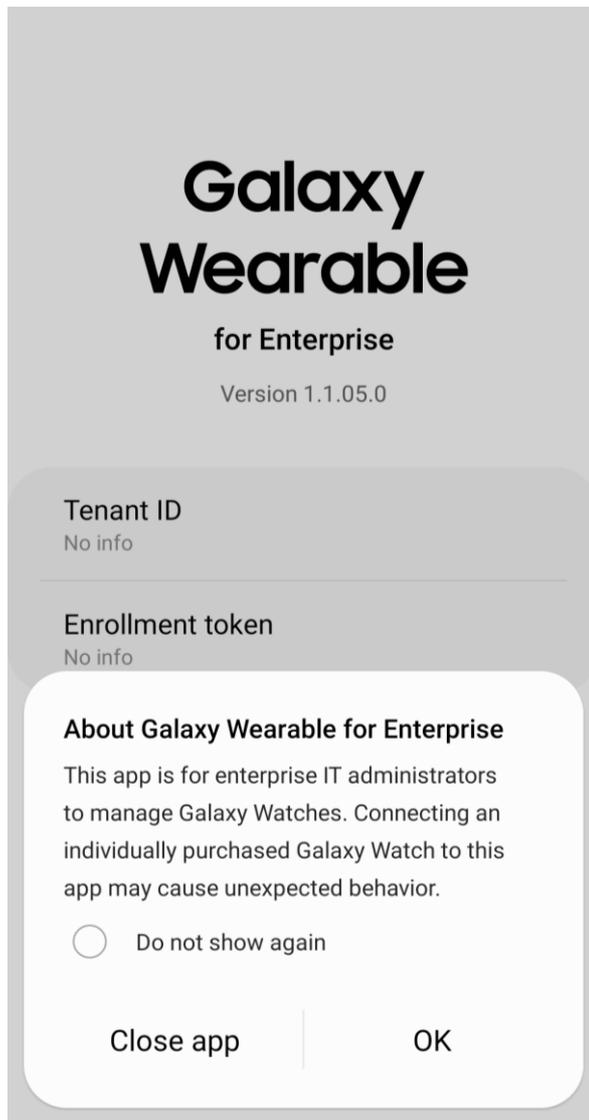

1. Go to **Group**, then click **Add**.
2. On the **Add Group** page, create a new **Device** group.
3. Once your Device group is created, go to **Device Enrollment** in the left navigation menu, then select **Wear OS Token** and click **Add**.
4. Give the token a **Name** and **Expiration Period**, then select the device group to assign the token to.
5. Click **Save** to return to the main list.
6. Click the name of the token you just created to open the Token Details page, which contains your Wear OS enrollment QR code.

### Enrollment Process

You can use the same phone to enrol multiple enterprise smartwatches in succession.

1. Open the **Galaxy Wearable for Enterprise** app.

2. If the app presents a dialogue, tap **OK** to proceed.

3. Tap **Scan new QR code** and scan the QR code with your phone's camera. If the scan succeeds, **QR code scanned successfully** displays on the screen.

 QR code scanned successfully.

4. Once Galaxy Wearable for Enterprise registers the QR code, you can enrol your enterprise smartwatch devices one-at-a-time. Ensure that the Samsung Galaxy phone's **Bluetooth setting** is turned on.
5. Launch the Galaxy Wearable app, then pair it with your Wear OS smartwatch.

6. On the Galaxy Wearable home screen, tap **Continue**, then confirm that the pairing number on the smartwatch matches the one on your phone.

Continue

7. Read and agree to the **End User License Agreement** and **Privacy Policy**.
8. Tap **Continue** to set up the watch. This may take several minutes.
9. After setup completes, tap **Open app**. If you consent to the **Google Terms of Service**, tap **I agree**.

10. Tap **Continue** if you agree to the **Samsung Knox Privacy Policy** and acknowledge that the watch isn't private because your enterprise manages the watch. The Knox Manage agent begins installing the smartwatch.

11. When finished, the app notifies you that **You're all set**. The watch detaches from the phone and begins to operate as a standalone device.

12. If you have another watch that you want to enrol, tap **Pair another watch** to repeat the same process.

#### *Confirm Wear OS enrollment*

After enrolling the Wear OS device, it's a good idea to verify that enrollment succeeded. Settings and Wi-Fi could be disabled after the enrollment depending on the profile. The best way to confirm enrollment in this case is to check the Knox Portal and make sure that the device is listed there as "**Enrolled**".
